THE NEXT GENERATION OF INTERACTIVE WHITEBOARDS.

ACTIVBOARD+2. YOU'VE GOT IT IN ONE.

PROMETHEAN
LIGHTING THE FLAME OF LEARNING

SPEEDY INSTALLATION

Installing Activboard+2 is quick and easy. Our new all-in-one system has integrated cable management, which means you can say goodbye to fitting projector cables into the ceiling, and hello to reduced installation downtime.

With Activboard+2 you can be up and running in half the time it takes to install a traditional white board - it really is that simple.

SPEAKERS

Activboard+2 comes complete with a multi-media system, comprising two speakers and separate amplifier mounted on the stand, to deliver excellent stereo sound.

ACTIVOTE

Add a set of student personal response devices with Activote and get the whole class fully interactive.

With Activote you can accomplish formative assessment in real-time, adding vitality and excitement to the learning experience.

SECURE DOCKING UNIT

Ensure that your Activboard+2 is secure with a specially designed docking unit. It's an optional extra with the Activboard+2 system.

The arm swings round enabling the projector to be locked away into a secure docking unit, minimising the risk of theft.

HEIGHT ADJUSTABLE STAND

Fitted to a wall-mounted height-adjustable frame, the 64" or 78" board moves vertically over a distance of 60cm (two feet), to suit the tallest or shortest teacher or pupil.

At its lowest setting, even the smallest pupil can reach the top of the board easily. It's easy to alter the height using an adjustable handle at the base of the board. Once adjusted, it automatically locks into position.

ACTIVPEN AND ACTIVWAND

Activboard+2 is supplied with our battery-free Activpen that works like a mouse to give you pin-point accuracy. It allows you to mouse over icons to reveal their functions, mastering software in minutes.

The Activwand (available separately) enables you and your pupils to reach even more of the board. And like the Activpen, it allows you to hover and click.

THE SHORT THROW PROJECTOR

Two years' development has created the Sanyo XE40 short throw projector, available exclusively through Promethean and its partners. It's a 1500 ANSI lumen unit with XGA resolution.

Mounted on a strong steel arm just one metre (39") from the board, it dramatically reduces shadowing, while producing crystal clear images. Easy to reach, it's simple to maintain, so its life can be prolonged.

BECTA compliant, it has a sonic alarm, no exterior buttons, a model-specific remote control, which the unit cannot be used without, built-in PIN locks and it can display the user's logo or name at start-up.

All these features make it much less attractive to thieves - and of course, it's bright orange.

SOFTWARE

We offer software that is both educationally relevant and easy to use. Our secret is simple: we listen to our customers and learn from them. This was our approach when we designed our [award-winning Activprimary and Activstudio software](#).

Activboard+2 comes complete with either Activprimary, Activstudio or Px software - Activprimary and Activstudio are compatible with Macs or PCs. Px software has been developed for the corporate/business market.

Activprimary uses large icons and bold colours to attract younger children. It includes extensive numeracy and literacy resources along with fun interactive features such as rolling dice and a built-in sound recorder.

Activstudio is for older learners. It includes over 5000 flipcharts, images, backgrounds and activities to inspire students of all ages. Like Activprimary, it has the ability to record video and audio, so that you can replay activities and review them.

ACTIVBOARD+2. THE WHOLE IS GREATER THAN THE SUM OF ITS PARTS.
